

M130 - LOST COVER LOCATOR

Not all metal detectors are created equal...

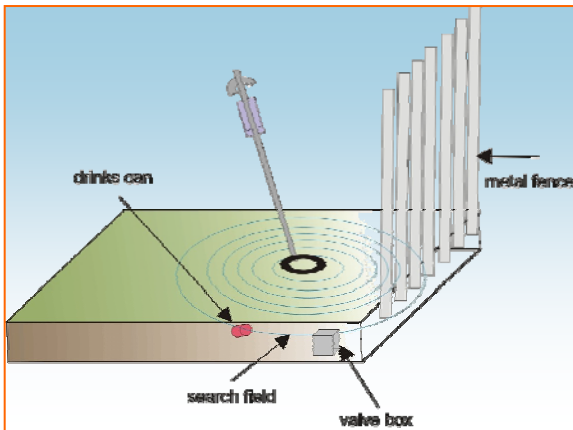

Cheap metal detectors have a wide search field which radiates outward causing many spurious false positive hits from fences, cars, buried cans and cigarette wrappers; they are also affected by overhead transmission lines and changes in humidity. On top of all this they also demonstrate a tendency to break when thrown around in utility vehicles. For the professional user these false indications and limitations are time consuming, frustrating and ultimately expensive.

The Sewerin M130 utilises discriminatory downward penetrating electrical circuitry to eliminate these unwanted indications and is manufactured in high impact ABS for added structural integrity.

PRINCIPAL OF OPERATION

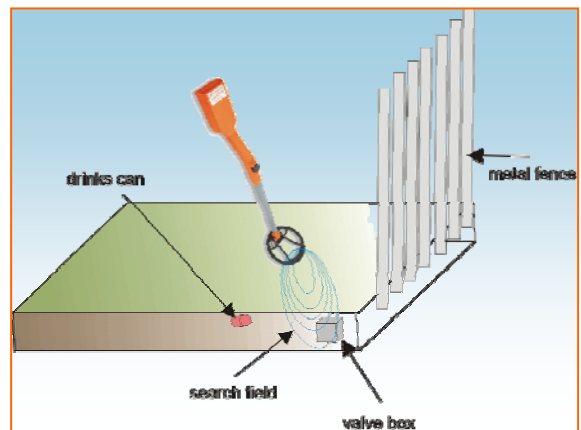

CHEAP METAL DETECTORS

Many false positive indications

M130 LOST COVER LOCATOR

Downward penetrating search field

M130 - FEATURES AND TECHNICAL DATA

- Moulded from high impact ABS makes the M130 lightweight, balanced and robust (it flexes when stood on!)
- Single control knob for easy one handed use
- Does not require constant re-zeroing
- Measures up to 1m deep
- Powered by PP3 (9V block) battery
- Ideal for valve boxes and hydrants
- Clear audio signal with headphone socket for noisy environments

DEPTH	
Stop tap box 50cm / 19"	Grey square
Fire hydrant cover 87cm / 34"	Red square
Inspection cover 95cm / 37"	Blue square
